HOW TO PREVENT DRY SKIN DURING WINTER

Use Sunscreen

Sunscreen isn't just for Summer. The sun can be just as harsh in Winter and can dry out your skin terribly. Apply Sunscreen to exposed areas 30 minutes before leaving the house.

Don't Over Exfoliate

Light exfoliation of the skin is essential for getting rid of dead cells, but a harsh exfoliator or scrub can aggravate the skin and damage the skin barrier. This can lead to redness, acne breakouts and dry skin. Using products like DMK's Micro Peel is great for light exfoliation without drying out and damaging your skin.

Don't take super-hot (or long) showers

Nothing sounds better than a steaming hot shower on a cold day, but hot water is actually the enemy of dry winter skin. Too much hot water causes increased evaporation of your skin's natural hydration.

Drink Plenty of Water

Drinking plenty of water is vital for skin hydration even during the colder months. DMK's EFA Ultra supplements are also great for maintaining healthy skin. Formulated with a powerful blend of plant-based essential fatty acids, seaweed extract, vitamins, minerals and amino acids, EFA Ultra encourages healthy skin, hair and nails!
