WE BET YOU DIDN'T KNOW THESE THINGS ABOUT LED LIGHT THERAPY

1 - LED light therapy was originally developed by NASA in the 1980s to help plants grow in space. Scientists soon discovered that the technology had potential health benefits for humans as well, including wound healing and pain relief.

2 - The different colours of LED lights penetrate different depths into the skin & treat different skin types & conditions.

3 - It is a gentle, non-invasive treatment alternative that successfully treats a variety of skin conditions, including acne, rosacea, and psoriasis. It can help to reduce inflammation, stimulate collagen production & improve skin texture and tone.

OUR FAVOURITE PRODUCT THIS MONTH IS....

DMK'S hero Vitamin A product, Revitosin.

Revitosin works to regulate, rebuild and strengthen the skin, bringing the skin back into balance. A powerful blend of Vitamin A helps to regulate cell proliferation, the flow of oil, fight free radicals and encourages RNA that prevents cell degeneration. It is also a great home product to support the skin between professional in-salon treatments. A very versatile formulation, Revitosin is suitable for acne, pigmentation, ageing, scarring and stretch marks.

"I started using the Revitosin a month ago & have noticed a huge difference in my skin already! It looks so much smoother & is actually glowing. I've had so many compliments! Another DMK product that I can't live without now!"

- J.M

STEMZYME™

THE REVOLUTIONARY BREAKTHROUGH IN SKINCARE REJUVENATION

AVAILABLE
NOW!

DMK MD.

We are so excited to bring you DMK's world-first breakthrough skin revision treatment that harnesses the power of stem cell technology and enzymes to rejuvenate and revitalise the skin as you have never experienced before!

As one ages, epidermal stem cells start declining. To keep the stem cell population above the optimal level in the skin, one needs to constantly regenerate them. Only having stem cells in the skin is not sufficient, unless they differentiate into other younger skin tissues like keratin, collagen, elastin etc. and that's why epidermal stem cells are so important in maintaining biologically young and bountiful skin.

DMK StemZyme Therapy does both, the regeneration of epidermal stem cells and their differentiation into biologically young tissues. This is done in a non-invasive way and using one's own stem cells. DMK StemZyme is a self-personalised treatment because your own stem cells are getting utilised in the treatment. Due to such a unique approach, there is no hazard of stem cell rejection in the skin, and it guarantees they will transform into young tissues.

In simplistic terms, think of your skin like an old house, as it ages, the foundation begins to weaken. Even if we do a constant renovation on the house, if the foundation is not renovated properly, the house will eventually collapse. So, we need to strengthen the foundation first and then start the house that sits on it. The skin is the same, we must renovate and restore the foundation before we work on the surface issues. In this context, epidermal stem cells are the skin's foundation building blocks because all skin tissue can originate from them. DMK StemZyme Therapy also prevents inflammation, reduces oxidant radical damage, strengthens immunity, and improves blood supply to the skin.

It involves 5 treatments over 50 days & results in the best skin you've ever had! Send us a message to find out more or ask us about it next time you're in the salon!
